Ford Expeditions are fuel injected vehicles requiring a constant fuel pressure that fluctuates with the throttle position. If the fuel pressure is too high or too low, it can cause drivability issues that are detrimental to your Expedition's engine and emissions systems, as well as your wallet. With that in mind, if you suspect your Expedition has fuel pressure problems, you should have it checked out immediately and repair the problem as soon as possible.

The fuel pressure regulator controls the fuel pressure in your Ford's fuel system, maintaining the proper pressure needed for your vehicle to run optimally. If the fuel pressure regulator malfunctions or fails completely, one or more symptoms will occur. While testing will need to be performed to verify the failure, ...

Ford Faulty Fuel Pressure Regulator Symptoms | It Still Runs

Say for example the pressure on sidewall says 50 pounds maximum, a good rule of thumb would be 10 to 20 percent below that number cold tire. My Kumhos have that 50 psi max, I run mine at 42 to 44 cold. The worst thing you would want to do is run a tire too low on pressure. Heat builds up on a low pressure tire, and can and will cause a blowout.

I had the exact same problem with my 2000 Expedition. The dealership recommended replacing the oil pressure sensor. The price of the sensor was less than \$10.00 but the labor was going to be way up there. I decided to replace it myself. The sensor is located beside the oil filter and the filter must be removed to get to it.

How to Recharge Your Car's AC: Includes AC Pressure Chart ...

Well that is what I am thinking it is, a bad connection. Because I know the temp gauge and the oil pressure gauge are connected at some point in the wiring, because there is no pinging or knocking of any kind when the oil pressure gauge is flatline but when the truck reaches operating temp at about 4-5 minutes of driving, the oil pressure reads normal.
