Digium has been in the VoIP gateway business since we started manufacturing cards in 2003. From the very beginning, clever people have used Digium cards, Asterisk, and ordinary computer hardware to build VoIP-to-TDM gateways. Just pop a card into a computer, install Linux, DAHDi, and Asterisk, and configure to taste.

VoIP Gateways with Asterisk | Official Site

In addition to VoIP protocols, Asterisk supports traditional circuit-

switching protocols such as ISDN and SS7. This requires appropriate hardware interface cards, marketed by third-party vendors. Each protocol requires the installation of software modules. In Asterisk release 14 the Opus audio codec is supported.

Asterisk Gateway Interface 1.4 and 1.6 Programming

AGI: the workhorse for your VoIP and General Telephony Applications for the Asterisk PBX. The Asterisk Gateway Protocol (AGI from now on) is the protocol used by the Asterisk server as its interface for telephony applications. AGI is just a way that allows you (as a software developer) to easily make telephony applications that asterisk will run someway along the dialplan.

The Asterisk Gateway Protocol: A practical introduction ...

Executes an Asterisk Gateway Interface compliant program on a channel. AGI allows Asterisk to launch external programs written in any language to control a telephony channel, play audio, read DTMF digits, etc. by communicating with the AGI protocol on stdin and stdout.

Application_EAGI - Asterisk Project - Asterisk Project Wiki
The Asterisk Gateway Interface, or AGI, provides a standard

interface by which external programs may control the Asterisk dialplan. Usually, AGI scripts are used to do advanced logic, communicate with relational databases (such as PostgreSQL or MySQL), and access other external resources. Turning over control of the dialplan to an external AGI script enables Asterisk to easily perform tasks ...
