See Article History. Pythagorean theorem, the well-known geometric theorem that the sum of the squares on the legs of a right triangle is equal to the square on the hypotenuse (the side opposite the right angle)—or, in familiar algebraic notation, $a^2 + b^2 = c^2$. Although the theorem has long been associated with Greek mathematician-philosopher Pythagoras (c. 570-500/490 bce), it is actually far older.

Pythagorean theorem | Definition & History | Britannica

In mathematics, the Pythagorean theorem, also known as Pythagoras' theorem, is a fundamental relation in Euclidean geometry among the three sides of a right triangle. It states that the area of the square whose side is the hypotenuse (the side opposite the right angle) is equal to the sum of the areas of the squares on the other two sides.

Pythagorean theorem - Wikipedia

Pythagoras theorem states that " In a right-angled triangle, the square of the hypotenuse side is equal to the sum of squares of the other two sides ". The sides of this triangle have been named as Perpendicular, Base and Hypotenuse. Here, the hypotenuse is the longest side, as it is opposite to the angle 90°.

The Pythagorean Theorem states that In any right triangle, the sum of the squared lengths of the two legs is equal to the squared length of the hypotenuse. The converse of the Pythagorean Theorem states that For any triangle with sides a , b , c , if $a^2 + b^2 = c^2$, then the angle between a and b measures 90° and the triangle is a right triangle.

Pythagorean Theorem Let's build up squares on the sides of a right triangle. Pythagoras' Theorem then claims that the sum of (the areas of) two small squares equals (the area of) the large one. In algebraic terms, $a^2 + b^2 = c^2$ where c is the hypotenuse while a and b are the sides of the triangle.

The Pythagorean Theorem states that the sum of squares of the two legs of a right triangle is equal to the square of the hypotenuse, so we need to prove $a^2 + b^2 = c^2$. Remember, the Pythagorean Theorem only applies to right triangles. 2 Arrange the triangles so that they form a square with sides $a+b$.

Derivation of Pythagorean Theorem. Pythagorean Theorem. In any right triangle, the sum of the square of the two perpendicular sides is equal to the square of the longest side. For a right triangle with legs measures a and b and length of hypotenuse c , the theorem can be expressed in the form. $a^2+b^2=c^2$.
