Abstract-A voided slab is a concept that simply removes the excess concrete from the expensive part of the structure slab. It was invented by JorganBreuningof Denmark about 20 years ago. It is now gaining popularity both in Europe and in Asia. This paper reviewed the several study done on voided slab system.

### (PDF) A Review Paper on Voided Slab:U-Boot Beton

Use of voided slab is spreading all over the world in recent times. Voided slab system has many advantages over conventional solid slab and some drawbacks also. There is a lot scope for studying the voided slabs in India. The compatibility of these foreign techniques must be workout with Indian standards.

### A STATE OF THE ART REVIEW ON REINFORCED CONCRETE VOIDED SLABS

Voided slabs are significantly improved versions of solid slabs and offer more improvements for the building as a whole. They consist of two thin slabs and ribs connecting them, having the same or better performances than a solid slab, with less concrete used. Structural benefits

### Voided slabs' benefits - Geoplast

Voided slabs are beneficial in seismic design, since the reduced dead weight of floors results in lower seismic forces applied to structures. Voided slabs can take advantage of post-tensioned reinforcement benefits to provide a thin slab with greater span. Voided slabs increase sustainability by saving materials and all materials are recyclable.

### Voidedslab - A Flat Slab Solution

Voided concrete slabs provide an open floor plate with fewer columns and no beams to limit design and ultimate use possibilities. As needs change, your building is better prepared to adapt. If it can be imagined, concrete can help make it happen and there is a good chance voided concrete slabs will make it happen more flexibly.

### VOIDED CONCRETE SLABS

Voided Slab Design . I think the biggest issue in your design file is the allowable tension in Bridge Site Stage 1. The allowable tension is 0.0948sqrt(f'c) but not more than 0.200 KSI. The tensile stress exceeds 0.200 KSI so increasing the concrete strength doesn't help (the 0.200KSI limit will always govern). ...

This design guide presents state-of-the-art practices in voided slab construction. The concept centers on removing concrete mass from the areas of the slab where it is not structurally efficient; thus reducing the dead load by as much as 35%. This floor system allows for large, clear spans and efficient overall slab thicknesses.

All voided biaxial slabs incorporate an array of rigid void formers which contain air within the voids. These void formers are most commonly made of plastic such as high-density polyethylene, and may use recycled materials. The void formers are produced in a variety of shapes depending on the design of the slab.

### Voided biaxial slab - Wikipedia

Voided Slabs Voided Slabs are a precast prestressed slab for bridge, building, marine pier and fish passage culvert replacement applications. Voided Slabs generally span 30' - 90'. These slabs can be used in applications where slab depth may be an issue or when construction speed is a factor.

Two-way Void Slab is an efficient two-way slab system eliminating concrete form the middle of flat plate without any beams and it is similar to the concept waffle slab. The structural dead weight reduction by concrete savings permits long span structure. In Figure 1 one unit and install concept of TVS system are shown. 671
